## Blue Band Overview

In October 2020, MNPQC partnered with CentraCare St. Cloud to collaborate on the Blue Band Project. In the Blue Band Project, providers in hospitals and clinics screen pregnant and postpartum patients to determine current and future risk factors for Hypertensive Disorders of Pregnancy (HDP). Patients determined to be at risk are given a blue bracelet that identifies them as being at risk for eclampsia and stroke and provides internet resources for the patient, as well as any providers or healthcare professionals they may interact with.

### **WHAT ARE BLUE BANDS?**

Blue Bands are bracelets given to patients diagnosed with preeclampsia to identify them as at risk for eclampsia and stroke. They provide resources for patients, healthcare professionals, and first responders.

### **WHY ARE THEY USED?**

Hypertensive Disorders of Pregnancy (HDP) are increasing and are a leading cause of severe maternal morbidity and mortality in the United States, with a large majority of cases being preventable. Recognizing the urgency of timely intervention, the Blue Bands serve as a visual cue to not only highlight risks, but also act as an indicator to healthcare professionals who may interface with the patient to prioritize prompt and comprehensive care.

### **PURPOSE**

The Blue Band Project aims to enhance communication among healthcare providers about the unique risks faced by patients with preeclampsia. The project seeks to reduce morbidity and mortality associated with Hypertensive Disorders of Pregnancy by ensuring patients receive timely and appropriate care.

This document provides suggested processes for implementing the Blue Band Project in birthing facilities, outpatient practices, and clinics.

## Implementation: 2 Options

### Option 1: Using MNPQC Website Support

- To create your own custom branded bands, contact:
  - [Wristband Bros](#)
  - Or another company of your choice
  - Below is an example of a blue band design
  - Include the QR code below to link back to MNPQC website if desired
  - Distribute bands to Hospitals and Clinics

- Create Patient Education Handout Materials
  - [See Washington State examples here](#)
  - See Aspirus St. Luke's Duluth [example 1](#) and [example 2](#) here
  - Link to [MNPQC's Blue Band Website](#)
    - When linking to MNPQC, be sure to include the QR code above on the bands for scannable access to the resource page
- Educate Clinical Staff
  - Standardized approach to BP measurement
  - Standardized approach to hypertensive treatment in peripartum women
  - Multidisciplinary simulation of emergency treatment in all healthcare entry points
  - Potential long term health issues for those with hypertensive disorders of pregnancy
- Communicate to:
  - Clinical team (nurses and staff etc.)
  - Providers
    - OB providers and midwives
    - Family practice providers
    - Emergency services
    - Internal medicine
    - Hospitalists
    - Laborists
    - Clinic personnel
    - Doulas
  - Media
    - Local newspapers
    - Local news media
    - Your facility communications or social media sites
    - Your facility website
    - Media release examples:
      - [Aspirus St. Luke's Duluth](#)
      - [CentraCare St. Cloud](#)
      - [Star Tribune: CentraCare St. Cloud](#)

- Critical Access Hospitals (affiliated or non)
- Emergency Medical Services
  - Ambulance and first responders
  - Fire departments

\*Before giving the Blue Band to a patient, please verify that the QR code on the patient's band works properly. Additionally, demonstrate to the patient how to access the necessary information by scanning the QR code on the band.\*

## Option 2: Using Your Facility Website

- To create your own custom branded bands, contact:
  - [Wristband Bros](#)
  - Or another company of your choice
  - Below is an example of a blue band design
  - Distribute bands to Hospitals and Clinics

<b>Large</b>					
Dimensions	216mm*12mm*2mm	Imprint type	SCREEN PRINT	Quantity	250
Item Color	Process Blue	Ink	Pantone White	Item No.	11465156
<b>Adult</b>					
Dimensions	202mm*12mm*2mm	Imprint type	SCREEN PRINT	Quantity	750
Item Color	Process Blue	Ink	Pantone White	Item No.	11465157

- Create Patient Education Handout Materials
  - [See Washington State examples here](#)
  - See Aspirus St. Luke's Duluth [example 1](#) and [example 2](#) here
- Educate Clinical Staff
  - Standardized approach to BP measurement
  - Standardized approach to hypertensive treatment in peripartum women
  - Multidisciplinary simulation of emergency treatment in all healthcare entry points
  - Potential long term health issues for those with hypertensive disorders of pregnancy
- Communicate to:
  - Clinical team (nurses and staff etc.)
  - Providers
    - OB providers and midwives
    - Family practice providers
    - Emergency services
    - Internal medicine
    - Hospitalists
    - Laborists

  - Critical Access Hospitals (affiliated or non)
  - Emergency Medical Services
    - Ambulance and first responders

- Fire departments

\*Before giving the Blue Band to a patient, please verify that the QR code on the patient's band works properly. Additionally, demonstrate to the patient how to access the necessary information by scanning the QR code on the band.\*

- Patient Education Online Resource Link
  - Create your own patient education online resource
    - [See CentraCare St. Cloud Example Here](#)
  - If creating your own, include links to other resources
    - Other resources:
      - [ACOG Guidance: Emergency Treatment for Severe Hypertension in Pregnancy](#)
      - [ACOG Preeclampsia and High Blood Pressure During Pregnancy](#)
      - [CMQCC Hypertensive Disorders of Pregnancy Toolkit](#)
      - [AWHONN POST-BIRTH Warning Signs Education Program](#)
      - [Preeclampsia Foundation Take 10](#)
      - [March of Dimes Preeclampsia](#)
      - [CDC HEAR HER Campaign](#)
      - [MoMMA's Voices](#)

## Recognition & Treatment Guidelines

Acute onset, severe hypertension in obstetrics is defined as:

- SBP  $\geq 160$  and/or
- DBP  $\geq 110$
- and persistent for 15 minutes or longer

Treatment with first-line agents occurs within 30-60 minutes of confirmed severe hypertension.

First-line antihypertensives include:

- IV labetalol
- IV hydralazine or
- Oral, short-acting nifedipine when IV access is not present

Minimum intervals between antihypertensives are different:

- IV hydralazine and nifedipine
  - 20 minutes or greater intervals
- IV labetalol
  - 10 minutes or greater intervals

Cardiac monitoring is not required; can be considered for patients with high-risk morbidities (such as coronary artery disease)

After acute antihypertensive therapy is initiated:

- BP every 10 minutes until
- SBP  $< 160$  and
- DBP  $< 110$  for 60 minutes

\*patient care team should have an individualized action plan for patients with persistent hypertension despite antihypertensives and eclampsia\*

## Recognition & Treatment Guidelines Continued

### **Discharge Guideline & Planning:**

- SBP <150 and DBP <100 for 24 hours
- 72 hours inpatient postpartum or equivalent outpatient monitoring
- No IV antihypertensives for 24 hours
- Stable on oral antihypertensives for 24-48 hours
- Consider BP monitor prescription if covered by insurance
- Follow-up appointment within 24 hours to 5 days
- Long-term implications and care
- Internal medicine follow-up

## Suggested EHR Data/Metric Tracking

<b>Patient Demographics &amp; Identifiers</b>	<ul style="list-style-type: none"> <li>• CSN</li> <li>• Ethnicity</li> <li>• Race</li> <li>• Language</li> </ul>
<b>Hospital Admission &amp; Discharge Details</b>	<ul style="list-style-type: none"> <li>• Admit date/time</li> <li>• Admit day of week</li> <li>• Discharge date/time</li> <li>• Delivery date</li> </ul>

# POST-BIRTH Warning Signs Education Program

<https://www.awhonn.org/education/hospital-products/post-birth-warning-signs-education-program/>

## SAVE YOUR LIFE:

## Get Care for These POST-BIRTH Warning Signs

Most women and postpartum people who give birth recover without problems. But anyone can have a complication for up to one year after birth. Learning to recognize these POST-BIRTH warning signs and knowing what to do can save your life.

<p style="text-align: center; margin: 0;"><b>Call 911</b> if you have:</p>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pain in chest</li> <li><input type="checkbox"/> Obstructed breathing or shortness of breath</li> <li><input type="checkbox"/> Seizures</li> <li><input type="checkbox"/> Thoughts of hurting yourself or someone else</li> </ul>
<p style="text-align: center; margin: 0;"><b>Call your healthcare provider</b> if you have: (you only need one sign) <small>(If you can't reach your healthcare provider, call 911 or go to an emergency room)</small></p>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Bleeding, soaking through one pad/hour, or blood clots, the size of an egg or bigger</li> <li><input type="checkbox"/> Incision that is not healing</li> <li><input type="checkbox"/> Red or swollen leg, that is painful or warm to touch</li> <li><input type="checkbox"/> Temperature of 100.4°F or higher or 96.8°F or lower</li> <li><input type="checkbox"/> Headache that does not get better, even after taking medicine, or bad headache with vision changes</li> </ul>

**Tell 911 or your healthcare provider:**

"I gave birth on \_\_\_\_\_ and  
I am having \_\_\_\_\_"  
(Date) (Specify warning sign)

Scan here to download this handout in multiple languages.

These post-birth warning signs can become life-threatening if you don't receive medical care right away because:

- Pain in chest, obstructed breathing or shortness of breath (trouble catching your breath) may mean you have a blood clot in your lung or a heart problem
- Seizures may mean you have a condition called eclampsia
- Thoughts or feelings of wanting to hurt yourself or someone else may mean you have postpartum depression
- Bleeding (heavy), soaking more than one pad in an hour or passing an egg-sized clot or bigger may mean you have an obstetric hemorrhage

- Incision that is not healing, increased redness or any pus from episiotomy, vaginal tear, or C-section site may mean an infection
- Redness, swelling, warmth, or pain in the calf area of your leg may mean you have a blood clot
- Temperature of 100.4°F or higher or 96.8°F or lower, bad smelling vaginal blood or discharge may mean you have an infection.
- Headache (very painful), vision changes, or pain in the upper right area of your belly may mean you have high blood pressure or post birth preeclampsia

This program is supported by funding from Merck, through Merck for Mothers, the company's 10-year, \$500 million initiative to help create a world where women are giving the Merck for Mothers, a license to MSD for Mothers outside the United States and Canada.

# AIM – Severe Hypertension in Pregnancy Bundle

<https://saferbirth.org/psbs/severe-hypertension-in-pregnancy/>

## SEVERE HYPERTENSION IN PREGNANCY

The Severe Hypertension in Pregnancy patient safety bundle revision process began in September 2021. In this revision process, subject matter experts revised existing and included new elements according to evidence-based practices. Additionally, the bundle revision process incorporated Respectful Care elements in a 5th R and throughout the rest of the bundle to ensure whole person, patient-centered, and trauma-informed care for every patient, in every clinical encounter. The revised Severe Hypertension in Pregnancy patient safety bundle was released in June 2022. For state, jurisdiction, and hospital-based teams interested in implementing a patient safety bundle related to severe hypertension in pregnancy, please utilize the revised Severe Hypertension in Pregnancy patient safety bundle.
